This is the default welcome page used to test the correct operation of the Apache2 servinstallation on Ubuntu systems. It is based on the equivalent page on Debian, from whi Apache packaging is derived. If you can read this page, it means that the Apache HTTP at this site is working properly. You should **replace this file** (located at /var/www/html/before continuing to operate your HTTP server.

If you are a normal user of this web site and don't know what this page is about, this p that the site is currently unavailable due to maintenance. If the problem persists, pleas site's administrator.

Configuration Overview

Ubuntu's Apache2 default configuration is different from the upstream default configuration several files optimized for interaction with Ubuntu tools. The configuration system i documented in /usr/share/doc/apache2/README.Debian.gz. Refer to this for the documentation. Documentation for the web server itself can be found by accessing the apache2-doc package was installed on this server.
